

DevSecOps Assessment & Feedback

Participant Name: Sree Ganesh

Interviewer Name: Awanish K Singh

Date: 03-01-2026

Rating Scale:

★ 1 = Very Poor | ★★ 2 = Poor | ★★★ 3 = Average | ★★★★ 4 = Good | ★★★★★ 5 = Excellent

1. Java Build Using Maven

Theoretical Understanding (Rate out of 5): _____3_____

Understanding of:

- What Maven is and why it is used
- Maven lifecycle (clean, validate, compile, test, package, install, deploy)
- Concepts like pom.xml, dependencies, plugins, packaging types
- Versioning, scopes (compile, test, provided, runtime)
- Maven local repository and its use

Commands & Their Use Cases (Rate out of 5): _____3_____

Ability to understand and use commands such as:

- mvn clean install
- mvn test
- mvn verify
- mvn package
- mvn dependency:tree
- Difference between mvn clean install and mvn clean deploy
- Difference between mvn test and mvn verify
- When and why to use each command in real projects

Sample Code / Hands-on Examples (Rate out of 5): _____3_____

Hands-on clarity for:

- Writing and modifying pom.xml
- Adding dependencies and plugins

- Building a Java project successfully
- Understanding build outputs (JAR/WAR)
- Target directory
- Integrating Unit Test and Integration test

Overall, for This Topic (Rate out of 5): _____ 3 ____

Comments / Suggestions for Improvement:

Candidate was able to explain the build using maven and its lifecycle, he needs to improve on the local repository and caching concepts and also the scope of the dependencies

2. GitHub CI/CD Pipeline Using GitHub Actions

Theoretical Understanding (Rate out of 5): _____ 3 _____

Understanding of:

- CI/CD concepts
- GitHub Actions workflow structure
- Jobs, steps, runners (public and self hosted)
- Triggers (push, pull_request, manual)
- Secrets and variables

Commands & Their Use Cases (Rate out of 5): _____ 3.5 _____

Understanding of:

- Git commands used in pipelines
- Maven commands inside workflows
- Usage of pre-built GitHub Actions
- Debugging failed pipelines

Sample Code / Hands-on Examples (Rate out of 5): _____ 3.5 _____

Hands-on clarity for:

- Writing .github/workflows/*.yml
- Building and testing code in pipeline
- Passing secrets and environment variables
- Using reusable or marketplace actions
- Conditional statements in pipeline using github predefined variables
- Job dependency in pipeline, a job dependent on other job

Overall, for This Topic (Rate out of 5): ____3.5____

Comments / Suggestions for Improvement:

He explained the actions he used in his pipeline but in some of the actions he was not very sure why he is using that; he needs to understand the purpose of each action template before using it.

3. Docker as a Containerized Platform

Theoretical Understanding (Rate out of 5): ____2____

Understanding of:

- Containers vs Virtual Machines
- Docker architecture (image, container, registry)
- Dockerfile concepts
- Why containers are used in DevOps

Commands & Their Use Cases (Rate out of 5): ____2____

Understanding and usage of:

- docker build
- docker run
- docker ps, docker logs
- docker images, docker rm, docker rmi, docker stop
- Docker Compose basics

Sample Code / Hands-on Examples (Rate out of 5): ____2____

Hands-on clarity for:

- Writing Dockerfiles
- Create an image using Dockerfile
- Multi-stage Dockerfile and its use
- Spin up container in detached mode
- Spin up container in interactive mode
- Accessing already running container
- Host and port mapping of container and accessing application from host
- Troubleshooting container issues

Overall, for This Topic (Rate out of 5): ____2____

Comments / Suggestions for Improvement:

He needs to practice docker commands, as he faced challenges in building images and running containers

4. Kubernetes as Container Orchestration

Theoretical Understanding (Rate out of 5): ____3____

Understanding of:

- Why Kubernetes is needed
- Kubernetes architecture (Master, Node, etc.)
- Kubernetes components like API Server, Scheduler, Controller Manager, etcd database, kubelet, kubeproxy
- Core objects: Pod, Deployment, Service
- ClusetrIP and NodePort Service
- Ports like ContainerPort, TargetPort, Port and NodePort
- Persistent Volume and PersistentVolumeClaim
- Access Mode of Vole like RWO, ROM, RWM

Commands & Their Use Cases (Rate out of 5): ____2____

Understanding and usage of:

- kubectI get, apply, delete
- Checking logs and pod status
- Getting inside pod and access container
- Scaling deployments
- Creating multiple replicas of the pods
- Namespace usage

Sample Code / Hands-on Examples (Rate out of 5): ____2____

Hands-on clarity for:

- Writing YAML files (Pod, Deployment, Service)
- Deploying applications to cluster
- Accessing service from the host using NodePort Service
- Creating PV and PVC object and persisting data in pod
- Exposing services
- Debugging common issues

Overall, for This Topic (Rate out of 5): _____2.5_____

Comments / Suggestions for Improvement:

He needs to understand the Kubernetes concepts and why we using it also needs to practice the kubectl commands and deploying object in Kubernetes cluster

5. Terraform as Infrastructure Automation

Theoretical Understanding (Rate out of 5): ____2_____

Understanding of:

- Infrastructure as Code (IaC)
- Terraform workflow (init, plan, apply, destroy)
- Providers, resources, variables, state files
- Benefits of Terraform

Commands & Their Use Cases (Rate out of 5): ____2_____

Understanding and usage of:

- terraform init
- terraform plan
- terraform apply
- terraform destroy
- State management basics

Sample Code / Hands-on Examples (Rate out of 5): ____2_____

Hands-on clarity for:

- Writing .tf files
- Creating AWS resources
- Using variables and outputs
- Managing infrastructure changes

Overall, for This Topic (Rate out of 5): ____2_____

Comments / Suggestions for Improvement:

Look like he did not practice the terraform commands, he has to work on that by creating infra using terraform and clean that up

6. AWS as Cloud Platform

Theoretical Understanding (Rate out of 5): ____2_____

Understanding of:

- AWS Regions & Availability Zones
- Core services (EC2, S3, IAM)
- Setting up AWS client
- Global service and Regional Services concept

Commands & Their Use Cases (Rate out of 5): ____2____

Understanding and usage of:

- AWS Console operations
- AWS CLI basics
- IAM role and policy usage
- Accessing and managing resources

Sample Code / Hands-on Examples (Rate out of 5): ____2____

Hands-on clarity for:

- Creating EC2/S3/IAM resources
- Connecting to EC2 using SSH
- Uploading content in S3 bucket using AWS cli

Overall, for This Topic (Rate out of 5): ____2____

Need to build Cloud understanding specially region, availability zones, global services and regional services and practice them by creating them manually as well as using terraform

Overall Assessment

- Overall Rating for the Candidate (Rate out of 5): ____2.5____ Do Not Hire

- Hire with Confidence
- Hire with Development Potential
- Do Not Hire

Comments / Suggestions for Improvement:

He was able to explain the Maven build and GitHub pipelines but he struggled with the hands on of the Docker and Kubernetes and concepts related to Cloud was not clear.

Communication

Good

Confidence

Good
